

Tailoring Platform — V1 Product Specification

1. Product Vision

Build a digital operating system for local tailors.

The platform is NOT a marketplace in V1.

Purpose:

- Help tailors digitize their workflow.
- Allow customers to place tailoring orders online.
- Reduce repeated physical shop visits.
- Manage stitching workflow digitally.

Initial production usage:

Single tailor (Mom).

Backend architecture supports multi-tailor expansion from day 1.

2. User Roles

Customer

Can:

- Create account
 - Browse tailor services
 - Place stitching orders
 - Upload cloth images
 - Choose measurement method
 - Schedule pickup
 - Track order status
 - Request alteration
 - Choose delivery slot
 - Receive delivery
 - Pay on delivery
-

Tailor

Can:

- Create account
- Add service pricing
- Configure urgency pricing

- Set weekly workload capacity
- Accept/reject orders
- Provide rejection reason
- View workload warnings
- Update order progress
- Approve urgent orders
- Handle alterations
- Change seasonal pricing

Tailor account status:

- Pending Approval
- Approved
- Suspended
- Inactive

Only approved tailors can operate.

Admin

Can:

- Approve/reject tailor accounts
 - Activate/deactivate tailors
 - View all orders
 - Manage platform manually
 - Control which tailor is operational in V1
-

3. Scope Restrictions (V1 Only)

Included:

- Ladies clothing only
- Single operational tailor initially
- Manual pickup and delivery
- Cash on delivery/payment handling offline
- Order tracking system
- Workload estimation system
- Alteration flow
- Urgent order flow

Not included:

- Online payments
- GPS tracking
- Delivery partner APIs
- Marketplace tailor discovery
- Ratings and reviews
- AI measurement assistance

- Real-time chat
 - Scheduling engine
 - Notifications system complexity
 - Automatic logistics system
-

4. Supported Clothing Categories

Examples:

- Suit
- Kurti
- Blouse
- Alteration requests

(More can be added later.)

Each service contains:

- Base price
- Estimated work hours

Example:

Kurti:

- Price = ₹500
 - Estimated time = 4–5 hours
-

5. Measurement System

Two methods.

Method A

Manual body measurements.

Customer enters:

- Chest
 - Waist
 - Shoulder
 - Sleeve length
 - etc.
-

Method B

Reference clothing pickup.

Customer gives:

- Existing stitched clothing

System asks:

How should new fitting compare?

- Same fitting
- Slightly tighter
- Slightly looser
- Custom note

Pickup includes:

- Raw cloth
 - Reference clothing
-

6. Pricing System

Two independent pricing systems.

A. Base Service Pricing

Example:

- Suit = ₹800
- Kurti = ₹500

Tailor can modify anytime.

Useful during:

- Festivals
 - Seasonal demand changes
-

B. Urgency Pricing

Tailor predefines surcharge.

Example:

Normal = 0%

Priority (3–4 days) = +20%

Express (1–2 days) = +40%

Tailor can modify anytime.

No manual per-order pricing allowed.

7. Multi Item Order Structure

Use parent-child order architecture.

Example.

Order Group #120

Contains:

- Pickup address
- Delivery preference
- Shared pickup fee

Children:

Item 1 → Suit

Item 2 → Kurti

Item 3 → Alteration

Each child contains:

- Price
 - Status
 - Stitching details
 - Measurement details
-

8. Pickup System

Customer selects pickup slot.

Pickup is manual.

At pickup:

Verify actual received items.

Store:

- Cloth photos
- Reference clothing photos
- Pickup receipt

Example:

Received:

- Top cloth
- Bottom cloth
- Dupatta
- Old suit reference

Purpose:

Dispute protection.

9. Order Workflow

Customer places order.

↓

Tailor reviews request.

↓

Tailor accepts/rejects.

↓

Pickup scheduled.

↓

Pickup completed.

↓

Physical verification done.

↓

Final approval.

↓

Stitching starts.

↓

Stitching completed.

↓

Delivery slot selected.

↓

Delivered.

10. Workload Management

Tailor defines weekly capacity.

Example:

40 hrs/week

Each service has estimated work hours.

Example:

Suit = 6–8 hrs

System calculates total booked workload.

If overloaded:

Show warning.

Example:

Estimated workload exceeded.

Would you still like to accept?

Tailor makes final decision.

No hard blocking.

11. Urgent Orders

Customer selects urgency level.

Example:

- Normal
- Priority

- Express

Tailor sees request.

System checks workload.

If deadline conflict risk exists:

Show warning.

Example:

Urgent order may affect current commitments.

Tailor decides:

- Accept
- Reject

No scheduling engine in V1.

12. Alteration Flow

Customer can request one free alteration.

Conditions:

- Within 48 hours of delivery
- Only if stitching defect/mismatch exists

Free alteration allowed for:

- Wrong fitting
- Stitching error
- Wrong design execution

Not allowed free for:

- Customer changed mind
- New design request

Platform bears alteration pickup/delivery cost.

13. Delivery System

Customer selects delivery slot.

Customer can reschedule.

If delivery attempt fails:

First failed delivery:

- Reschedule allowed

Second failed delivery:

- Customer pays extra delivery fee OR collects manually

No neighbour delivery unless customer explicitly authorizes specific person.

14. Cancellation System

Allowed:

- Pending Approval
- Pickup Scheduled
- Cloth Collected

Not allowed:

- Once stitching starts

Once stitching begins:

Order locked.

No cancellation.

15. Order Rejection Rules

Tailor may reject order.

Reason required.

Example:

- Too busy
- Fabric issue
- Design impossible
- Tailor sick
- Deadline too short

Tailor response deadline:

12 hours maximum.

If no response:

Order auto rejected.

16. Communication System

No internal chat.

Instead:

Order discussion thread.

Example:

Customer:

Please keep sleeves slightly longer.

Tailor:

Okay noted.

Simple non-realtime communication only.

17. Payment Flow

No payment gateway.

No backend payment logic.

Payment handled manually.

Example:

Cash on delivery/pickup.

Platform stores no transaction logic.

18. V2 Ideas (Not Building Now)

- Multi-tailor marketplace
- Tailor discovery
- Ratings/reviews
- Verified portfolio
- Scheduling engine

- Smart deadline engine
- Logistics system
- Online payments
- Saved measurement profiles
- Delivery APIs
- Language support
- Voice notes
- Automated notifications
